

Methods to prevent deformation of PVC table mats:

Avoid high temperatures: Do not place overheated items directly on the table mat, such as freshly cooked hot dishes, to prevent deformation caused by high temperatures.

Avoid heavy pressure: Do not place particularly heavy items on the table mat for a long time.

Proper storage: When not in use, it should be placed flat and not folded or curled for storage.

Avoid pulling: Do not forcefully pull on the table mat to prevent it from deforming.

Pay attention to the ambient temperature: Try not to let the table mat be in an environment with drastic temperature changes.

Regular organization: Regularly organize table mats to keep them flat.
